

SureShot™ Cap:

The 63mm SureShot™ Cap replaces traditional push-pull closures in the market by utilizing LMS valve technology. No hand or mouth actuation required; simply squeeze and release the bottle to dispense. The LMS valve technology self closes upon release of the bottle and stays close until you actuate it again, providing a leak-free solution. Plus, with baffling plastic designs, shaking the bottle won't cause the valve to open and leak; so no worries about leaking while in the gym-bag or on the bike!

The SureShot™ Cap is available in almost any color (PMS matching available) and is made to order. Contact an LMS sales person for free samples and neck finish drawings.

- Cap material: Polypropylene

- Valve options: Available with V7 and V2 valves. See SureSnap® data sheets for functional information on the V2 and V7.
